Complete Peace of Mind

Secom now supports offsite monitoring of Gallagher's 'Type 1A' Security Alarm System in Australia.

The newer government **Type 1A** security alarm system standard offers new methods of offsite alarm monitoring. Compliant monitoring can be achieved over Internet links thanks to Gallagher's end-to-end data encryption. A variety of connection types are now supported including xDSL, NBN, 3G/4G, leading to **reduced ongoing monitoring costs** that deliver big lifecycle savings. These connection types are combined to provide transmission path redundancy. Plus, our connection times are generally much faster as we do not require bespoke telecommunication lines and equipment.

Secom is one of the world's largest alarm system monitoring companies. Our Australian ASIAL Grade A1 alarm monitoring centre has been online since 1991. We also offer a protective security patrols, alarm response, and guarding. Secom is the only company offering the full suite of Type 1A services in-house, spanning system design, installation, maintenance - and now offsite alarm monitoring.

To stay compliant with the Commonwealth Government's directive, Australian Government organisations must upgrade to the newer Type 1A standard **before August 2021**. Gallagher's Type 1A SAS has some key advantages, such as wide industry support, networking of up to three T1A panels per connection, and the only fully-approved Type 1A Central Supervisory System on the market.

Secom is one of the largest installers of Gallagher's Type 1A product and can assist you with design or budgeting needs.
